

2022 French Creek Trail Feasibility Study – Interactive Comment Map

Union City Borough is working with The EADS Group and UpStreet Architects to study how to best create a nature trail along French Creek. The Borough recognizes French Creek as an important community asset and is undertaking a planning effort to determine how to make it a better destination and asset for our residents. The nature trail will generally be located between Devereaux Park and the American Legion Little League Fields. The trail will be aligned along French Creek and through the Downtown area as much as possible. Trail easements on public and private properties and on-road sections will be needed. The Study is also evaluating areas for native vegetation plantings and riparian enhancements and approaches for attracting residents and visitors to the French Creek Corridor.

The Borough recognizes that efforts to connect itself, its residents and visitors, its other recreation assets, and other community points of interest to the French creek Corridor have been limited. Other than for a few locally known, non-developed, access points, toe paths and viewpoints, the ability of our residents to properly view, access and enjoy this resource is limited.

Because this is such an important community project, it is vital that residents are meaningfully engaged as the Study is being completed. Therefore, we have prepared an Interactive Comment Map to gather input on potential trail routes, access and connection

points to the Creek, seating areas, areas for new native vegetation plantings and areas where overgrown vegetation is blocking views of the Creek. Other comments regarding trail features or development of the nature trail are appreciated.

You can access the Interactive Comment Map using the following link:
